

1 Introduction

TEA-Buddy (Test Encapsulation for Automation - Buddy) is a specialized tool designed to streamline the validation and verification of automotive software. It provides an efficient, automated testing workflow for infotainment systems and embedded software, reducing manual efforts and improving test accuracy.

1.1 Motivation

- Derive test sequence from logs
- Design test cases by user query
- Increase test coverage and auto generate test cases
- Test case selection with respect to change area in the SW
- Reduce scripting language dependency

1.2 Overview

- Provides a user-friendly interface for test generation, execution, and reporting
- Supports software change tracking to compare different versions effectively
- Integrates with infotainment systems and embedded devices for seamless testing
- Enables scheduling and execution of automated test cases with minimal user intervention

1.3 User Guide

- [Pre-requisites and Requirements](#)
